## Concerned about hard, unhealthy water? Here's the solution!

The **ElectraFlo** electronic water conditioner not only stops scale buildup, it reverses it. It does this with no salt, chemicals or filters and extends the life of all your water using appliances, especially water heaters. Tammy Crouch and her husband, Wes, moved out south of Midland about a year ago and hooked their home up to a water well. Within 1-2 months the aerators on their faucets were clogging up and there were hard water stains on their tubs and toilets. After having their water analyzed they had been told that a traditional salt-based softener would not help unless they purchased an extremely expensive industrial unit.

When Tammy heard about the **ElectraFlo** electronic water conditioner and that it would work no matter how hard the water was, she was ecstatic. "Besides," she said, "with a 100 percent guarantee, we had nothing to lose!" Tammy noticed the difference several days later. "On a Saturday I washed my hair and it was as soft as it can be!" Within 3-4 weeks she could tell a difference in the bathtub—no hard water ring there or in the toilets—and there were no water spots on the fixtures. There is no green gunk buildup around the faucets, either and it has only been about two months since the unit was installed.

Berry and Shirley Johnson from Andrews are seeing similar results after installing the **ElectraFlo** on their home that has a water well. They had installed a salt type softener a few years earlier but were still having problems with scale buildup and were having to change out heating elements in their electric water heater about every year. Shirley says her shower head is completely unclogged now and they had to turn the temperature down on their water heater. Kevin Good, owner of **Good Technologies**, which installs the **ElectraFlo**, notes that, compared to a salt-based softener, the unit saves the average family about \$200 per year in salt and about 6,000 gallons of water used in regeneration over that same time period, not to mention that there is no maintenance and it does not fill up septic tanks.

Because so many of his clients have also been concerned about chlorine and other chemicals in the water, Kevin now has available water filtration systems for the whole house and for individual sinks and showers. The U.S. Council of Environmental Quality is also concerned about chemicals in the water. The report on the subject states, "Cancer risk among people using chlorinated water is as much as 93 percent higher than among those whose water does not contain chlorine." Ralph Nader's research group has found that tap water has as many as 2100 toxic chemicals that can cause cancer. Kevin states, "Everything that goes down the drain, on our lawns, on our agricultural fields or into the environment by any means eventually winds up in the water we drink."

Kevin is now installing Whole House Water Filtration Systems that remove chlorine and other harmful chemicals that are common in tap water and it gives you chemical-free, odor-free, great tasting water, at every tap, tub and shower in your

**HEALTHY WATER** Kevin Good of Good Technologies installs Whole House Filtration systems like these that remove harmful chemicals from water, which also removes scale and hard water deposits. Call 425-8127.

home. Chlorine-free showers and baths will leave your skin softer and more hydrated, your hair will be silky smooth and hair color will last longer. Washing your clothes in chlorinated water fades colors and damages fabric. Units for sinks and showers are great for apartment dwellers. Kevin's Drinking Water Filtration System **filters out over 100 regulated contaminants: cysts, chlorine, lead, fluoride, VOCs, THMs, MTBE and more.**

Along with the **ElectraFlo**, this is the perfect system, especially for anyone building a home. Kevin says, "We put one of our systems in at Mockingbird Heights a few weeks ago, as the owners were moving in. We took out the salt type softener that some builders traditionally put in and replaced it with our NO SALT system. Salt softeners don't remove chlorine or any of the toxins. Many doctors advise their patients with high blood pressure or heart problems not to shower in salt softened water. For about the same price as a good softener or less, they have healthy, drinkable water at every source in the house, and their house will never have scale buildup! This system will pay for itself many times over. Our filtration system is rated #1 in America. See website for detailed info."
